### Focus on the TS44

The TS44 is the sturdiest of our aluminum extrusion , an ideal solution for impeccable banners

### Many Features to Target Many Applications...

Ideally suited for interior and exterior large to [very large frames](#) the TS44 t is the solution of choice to decorate hallways, malls, buildings, construction sites...with canvas, fabrics, standard or mesh vinyl.

The first picture represents a 2' x 3' frame realized with a [DK44 Kit](#) , on top you see the clipping bar ([TS80](#)) on front and on the bottom part of the frame, the TS80 is clipped on the side and much less visible.

### Front Clipping

The front clipping gives an interesting opportunity to associate the color of the clipping bar (delivered in white) with the frame and/or the decoration of the frame environment.

### Side Clipping

Clipping the graphic on the TS44 frame with clipping bars (TS80) on the side allow to focus on the graphic. In the same way the clipping bar on the sided can be painted with a spray paint (i.e. Krylon)

### And Even Rear Clipping

It is possible to entirely wrap the frame with the graphic and fix it using the two rear grooves (See last Pictures). Brackets must be used to fix the frame on a wall.

### Applications

From Supermarkets, to malls, wall mounted banners, constructions sites, museums, exhibitions buildings, hallways, sports events, conference centers, aquariums, aquatic centers, billboards, architectural realizations; the TS44 will provide Sign Professionals with cost-effective solutions for many applications.
